EchoStream™ for AIX®

Data Protection and Recovery Has Never Been So Fast, Easy—and Affordable.

EchoStream™ for AIX® from Vision Solutions is a true continuous data protection solution that delivers nearly instantaneous recovery of your applications and data at the push of a button. Unlike traditional backup solutions, it enables you to recover data from any point in time, easily and immediately. So when your business encounters accidental or malicious data corruption you can reverse the damage and continue on. Use it to make your data more secure, and as a cost-effective business continuity and disaster recovery strategy.

Better Protection, Faster Recovery

EchoStream for AIX accelerates recovery, cuts costs and does not disrupt the performance of the applications it protects. It's the perfect recovery solution for software corruption, security breaches, virus attacks, accidentally deleted files and other causes of data loss.

- “Dial back” to quickly and easily return any application or database to any previous point in time.
- Recover large amounts of data in only minutes.
- Reverse data corruption in a fraction of the time/labor required for recovery from tape.
- Eliminate the exposure to major data loss of conventional backup and restore technologies.
- Achieve your recovery point objectives (RPOs) and recovery time objectives (RTOs) simply and affordably.
- Get reliable disaster recovery by replicating your data to a remote location.

“With EchoStream for AIX protecting our business, we have the confidence for ‘out of the box’ thinking. If we can dream it up, we can do it.”

True CDP—the Widest Range of Recovery Options

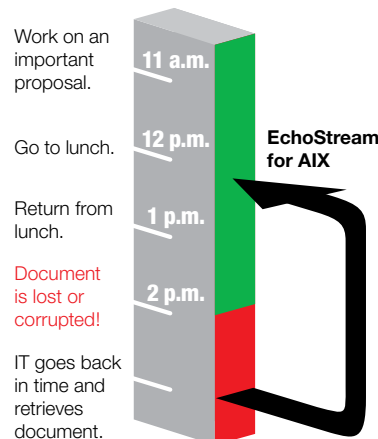

EchoStream for AIX is a **true** continuous data protection solution that delivers nearly instantaneous recovery of your data and applications at the push of a button—enabling you to easily recover data from any point in time:

- Provides the definitive solution for recovery from data corruption issues, with the widest range of available recovery points.
- Ensures faster recovery with excellent recovery point granularity—to any point in time. Choose a recovery point based on where a failure occurred.
- Flexible technology allows rapid data or server recovery for any database, file system or application environment.
- Supports heterogeneous storage and addresses both logical and physical corruption issues.
- Consistency groups are used to maintain proper write ordering for reliable, disk-based recovery—improving efficiency without the worry and hassle of tape backups.
- Easy, affordable and innovative solution for local and remote recovery that addresses your disaster recovery and compliance requirements.

EchoStream for AIX Lets You Go Back in Time

With **EchoStream for AIX**, you don't have to worry about being able to meet your business obligations. Even if the worst happens and a vital application fails or you lose critical data, you can quickly recover and resume operations.

- Eliminate the costs and consequences of losing critical business data.
- Ensure business continuity for your customers, partners and employees.
- Easily comply with regulatory mandates for data protection and availability.
- Replicate data to a remote location for easy, reliable disaster recovery capabilities.
- Eliminate backup windows by performing tape backups and batch reports from your backup environment.

High Availability Disaster Recovery Systems and Data Management
